

# PureClear™ Inspection Scopes and Visualization Stations

## Documented visual inspection for channeled instruments and scopes

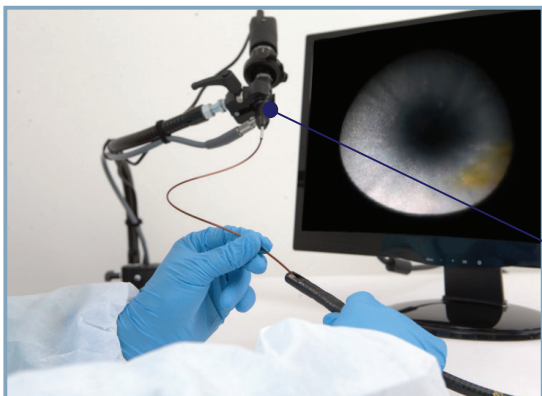

PureClear™ Inspection Scopes allow technicians and nurses to visually inspect internal device surfaces for debris and damage. The internal channels, joints, and mechanisms of scopes and other reusable surgical and diagnostic devices can be inspected for functional integrity and to ensure they are free of residual soils and particles.

- Inspects channels, connection ports, distal tips, and spaces behind elevator channels
- Easy identification of particles, bio-film, damage, and irregularities
- PureClear™ Visualization Station package available for dedicated inspection areas
- Flexible arm allows users to safely and ergonomically position scopes for each worker
- 86mm scopes help inspect even the smallest lumens
- Height-adjustable to any user most comfortable working height
- Water resistant for work in decontamination room

*"... more healthcare-associated outbreaks have been linked to contaminated endoscopes than to any other medical device."*

- CDC Guidelines for Disinfection and Sterilization in Healthcare Facilities, 2008

Task lights illuminate and magnify external visual inspection

PureClear™ Inspection Scopes illuminate, magnify, and provide high resolution images and video for crisp, clear visual inspection documentation
