

Pure LandingPad™ Silicone Sink Liner

Enhanced protection to help optimize instrument life

The Pure LandingPad™ Silicone Sink Liner offers dense impact protection for delicate and expensive instruments during manual cleaning and flushing. The liners fit easily into sink bottoms and on countertops. With this added protection, departments are helping to ensure a longer functional life for their instruments.

Protecting against frequent impact

Reusable medical devices can go through dozens of reprocessing procedures every week. Repeated impact with the sides and bottoms of stainless steel sinks, or with hard counter surfaces, can cause damage to these devices, which in turn can reduce their longevity and increase replacement costs for the department. Pure LandingPad Sink Liners add constant protection during daily reprocessing procedures by shielding delicate devices from hard surfaces.

Designed to last

Pure LandingPad Silicone Sink Liners are made with non-toxic, environmentally friendly materials. By utilizing medical-grade silicone, Pure Processing has assured that these liners will be extremely durable. They are easy to wash and maintain, and will withstand hundreds of cycles of use. Perforations in each liner allow liquids to drain easily without removing them from sinks. However, if they need to be used elsewhere, they are lightweight and easy to transfer from sink to sink as needed.

Easy to clean and disinfect

Pure LandingPad Sink Liners can be easily cleaned in the plastic cycle of an automated washer, and/or with environmental disinfectants. Simply spray on the disinfectant and let it sit for the recommended contact time before rinsing.

Features

- Standard 20 x 20 size
- Custom fit sizes available
- Can be used in sinks and on countertops
- Non-toxic, eco-friendly, anti-static material
- Easy to clean
- Compatible with PureSteel™ Sinks, PureChannel™ Flush Instrument Channel Cleaner, and ProSpray™ Surface Disinfectant
