**pure**  
PROCESSING

Pure Processing develops and manufactures solutions for easy, fast, safe and effective medical device reprocessing.

**Our products are designed to:**

- Meet or exceed regulatory guidelines, standards and requirements
- Deliver safe outcomes for staff, instruments and patients
- Deliver more opportunities for productive throughput

**Our expertise:**

- Reprocessing ergonomics
- Workflow requirements
- Extensive knowledge of facility systems operations

Pure Processing expertise and products help organizations achieve three key objectives:

**Optimal Patient Outcomes**

Pure Processing helps facilities prevent avoidable infections with technologies and workspaces that help achieve thorough instrument cleaning and disinfection, while also maintaining compliance.

**Enhanced Operational Efficiencies**

Efficiency and productivity are gained by providing tools to improve processes and streamline overall workflow, while optimizing ergonomics to avoid worker injuries.

**Reduced Costs**

Pure Processing technologies are specifically designed to help reduce instrument damage, worker injuries, and the risk of infections.

We offer expertise and collaborative services to architects, builders and department managers in the form of:

- Customer workflow deep dive to strategize current and future needs, staff safety and compliance issues
- Assessment of project scope, needs and expectations
- Review product offerings with customer
- Confirm objectives for project, products and accessories, timelines, and purchasing options
- Educational offerings throughout the process, as well as post-installation in-servicing

**PureSteel™ Healthcare Reprocessing Equipment**

- Custom sizes available
- Standard, sprayer and deionized faucets
- Height-adjustable and fixed heights
- Integrated flushing system
- Soaking timers
- Temperature monitoring
- Integrated LED-lit basins
- Instrument tracking capable
- Ergonomic back wall
- High-level disinfection system
- Magnification and inspection
- Organizational accessories
- Electromechanical lifters
- Instrument-protecting drain
- Overflow prevention drain
- Marine edges
- Cord management
- Volume etching plates
- Caster, bullet and seismic feet options
