

APPLICATION

The FlexiPump Independent Flushing System is an automated flushing system capable of flushing any lumened instrument for more compliant, ergonomic and standardized lumen flushing practices. The FlexiPump system can be used on laparoscopic, robotics, suction tips, urology, orthopedic, ocular, bariatric, rigid and flexible scopes and more.

DESCRIPTION

The FlexiPump Independent Flushing System is an automated flushing pump to copiously flush channeled instruments during manual cleaning. The FlexiPump allows hands-free flushing of multiple instruments at once and has programmed flush cycles for consistent, repeatable flushing. This consistency introduces safety compliance in accordance with device IFUs, ANSI/AAMI guidelines, CDC guidelines, Joint Commission Standards and more. While the FlexiPump flushes channeled devices, technicians are freed up to perform other tasks. The FlexiPump system is also adaptable to any department with its wide range of installation options. These installation options can be customized to each departments' individual needs and challenges.

The Selections Checked Below Apply to This Order

FLEXIPUMP SYSTEM
