

FlexiPump™ Independent Flushing System

We recently asked our customers what they like about the FlexiPump Independent Flushing System. Here is what they said...

"It is so nice to finally have something that will flush soap water through lumens. Before the FlexiPump, we manually flushed with a 60cc syringe and it was killing us. This you just hook up and let it be. We are finding more and more uses for it."

"The FlexiPump has allowed us to flush multiple instruments at one time and has also helped save our hand, so we don't have to constantly draw up fluid in a syringe."

"It provides faster cleaning time, it is also timed so you have options of how long you want to flush."

"The pumps are a great help to use with our lap instruments."

"Everyone likes the fact that you can hook the instrument to the FlexiPump and let it do its thing while they work on something else. Awesome device."

"Customer service is second to none! The pump has nearly removed the carpal-tunnel complaints in my department"

"Ours is great in the OR, it's quick and efficient."

"It's a lot easier than flushing with a syringe!"

"The technicians fell in love with it when they saw the flushing pump."

"The Flexipump System is a great asset to our processes."
