

PureClear™ Inspection Scopes

Documented visual inspection for channeled instruments & scopes

PureClear™ Inspection Scopes allow technicians and nurses to visually inspect lumens and devices for debris and damage. The internal device channels of new, refurbished, loaned, and repaired scopes and other surgical instruments can be inspected for functional integrity and to ensure they are debris-free, helping meet device IFUs and guidelines.

- Inspects channels, connection ports, distal tips and spaces behind elevator channels
- Easy identification of debris, bio-burden, damage and irregularities
- Safe for new, refurbished, loaned and repaired scopes

"...more healthcare-associated outbreaks have been linked to contaminated endoscopes than to any other medical device." - CDC Guidelines for Disinfection and Sterilization in Healthcare Facilities, 2008

Flexible arm allows users to safely position inspection scopes with consideration to worker ergonomics

Monitor allows for visual inspection and documentation

Multiple distal tip sizes and lengths for every channeled instrument in your department

PureClear™ Inspection Scopes illuminate, magnify, and provide high resolution images and video for visual inspection documentation

High powered, adjustable lumination allows concentrated and targeted light for optimal visual inspection

PureClear™ Inspection Scope Station package available for dedicated areas of visual inspection
