

APPLICATION

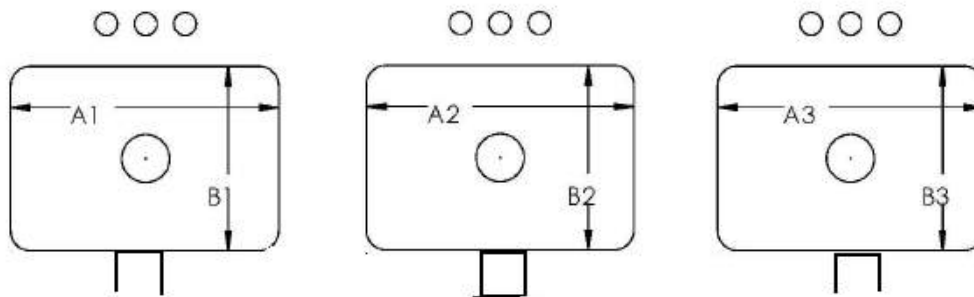

The PureSteel Volume Etching Plates allow an accurate measurement of cleaning solutions inside sink basins. The Volume Etching Plates are removable and easy to clean inside a cart washer. Because each plate is removable, they are also easy to replace as needed. Etching plates can be made to fit unique basin specifications by filling and submitting the request form below.

Sink Basin Dimensions

Please indicate the dimensions and information related to the sink basin in which the volume indicator etching plate will be installed. **Photos of the basin and general area must be submitted for each set of unique dimensions or basin.**

Quotes and orders cannot be provided or processed unless all information is filled and submitted. This is to ensure your volume etching plates accurately reflect the fill of your sink.

Provide sink measurements as indicated on the drawing and write them in the space below.

Measurement	Sink 1	Sink 2	Sink 3
A - Length			
B - Width			
Depth
